Hospital management system:

Hospital management system reduces all the paper works of patients, doctors and all the workers. It does many works like

- Maintain the medical records of the patient
- Maintain the contact details of the patient
- Keep track of the appointment dates
- Save the insurance information for later reference
- Tracking the bill payment

Advantages:

- Time-saving Technology
- Improved Efficiency by avoiding human errors
- Reduces scope for Error
- Data security and correct data retrieval made possible
- Cost effective and easily manageable
- Easy access to patient data with correct patient history
- Improved patient care made possible

- Easy monitoring of supplies in inventory
- Reduces the work of documentation
- Better Audit controls and policy compliance.
